DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/22/08 has been entered.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

3. The drawings were received on 9/13/04. These drawings are acceptable.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1, 2, 6-9, 11, 13-15, 19, 20, 24-27, 29, 32, 33, 37-43, and 54-84 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kalevo et al (WO 98/41025).

Response to Arguments

6. Applicant's arguments filed 12/22/08 have been fully considered but they are not persuasive. Applicant asserts on pages 13-15 of the Remarks that Figure 3 of Kalevo et al fails to

disclose at least one parameter of the filtering operation is determined based on the types of the prediction encoding methods. However, it is noted in applicant's analysis of Figure 3, applicant fails to recognize that the decoded frame from 15 is not stored into the frame memory 16.

Rather, Kalevo et al discloses applicant's claimed filtering process 33 prior to the storage. Thus, the filtering operation, and its parameters used, is an integral part of the prediction encoding method.

Applicant also asserts on page 16 of the Remarks that Kalevo et al fails to disclose truncating pixels. However, Equation 2 of Kalevo et al discloses the concept of such common truncation technique wherein n is limited between 0 and 6.

Applicant further asserts in Section 2.3 that Kalevo et al fails to disclose a filter according the block types. However, the abstract and the background sections of Kalevo et al discloses the concept of such common coding of blocks wherein the coding method may be intracoding (or interceding).

Applicant finally asserts on page 17 of the Remarks that Kalevo et al fails to disclose performing a filtering operation on a block boundary. However, Figure 2 of Kalevo et al illustrates the concept of such common filtering operation on block boundary 30.
